

CAPTOR

# Aster Global High Yield

## Monthly Report – July 2025

### Portfolio Manager Comment

The summer month of July was relatively calm, with the month beginning with continued talk about tariffs, which initially pushed up risk premiums. During the latter part of the month, several deals were made on tariff levels, which has reduced concerns and thus lowered risk premiums again. Agreements have been reached with, among others, the EU, South Korea and Japan. Both the ECB and the Fed announced the key interest rate during the month, both of which left it unchanged, which was as expected. Statistics during the month showed strong job figures in the US and higher-than-expected inflation in Sweden, which has pushed up interest rates somewhat. Across the Swedish curve, approximately one interest rate cut has been priced out. The Swedish four-year swap rate is up 25 basis points during the month.

There has been a positive trend in the credit market during the month for high yield with the spread on the European index compressed 15 basis points while the US index compressed 3 basis points. The difference in spread between the indices continues to widen, with the US index trading 52 basis points above the European at the end of the month.

### Investment Goal and Strategy

The fund targets highly liquid exposure in European and North American High Yield credit, whilst keeping both currency and interest rate risk in Swedish Krona. To this end credit exposure is mainly assumed via index-based centrally cleared Credit Default Swaps (CDS). The Reference Indices of the CDS contracts are Itraxx Europe Crossover and CDX North America High Yield. The exposure to each issuer is equally weighted, ensuring a well-diversified portfolio.

The fund is also allowed to invest directly in corporate bonds with the corresponding rating. When the exposure to corporate credit is assumed through CDS contracts, the capital of the fund is simultaneously in AAA rated SEK bonds, primarily Swedish covered bonds.

The fund takes positions that eliminate its exposure to companies that do not meet the sustainability requirements set up by Captor. The fund is classified as Article 8 according to the Disclosure Regulation.

### Risk Metrics

Duration	3.78 years	CDS index EUR HY spread	267.40 bp
Credit duration (CDS)	4.89 years	CDS index USD HY spread	319.45 bp

Reasons To Invest

The fund is suitable for investors with home currency in Swedish Krona looking for attractive risk-adjusted returns through a well-diversified exposure to global high yield credit. The strategy is suitable for investors looking for liquidity in all market conditions.

By construction the strategy effectively avoids being directly exposed to EUR or USD long term interest rates. In addition, the fund avoids all costs typically associated with hedging foreign currency back into Swedish Krona.

How To Invest In The Fund

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

Risk Profile

Credit risk is the dominant risk factor in the fund. It is exposed to credit spreads of both its bond positions and its position in CDS contracts.

Portfolio managers

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
