

CAPTOR

Aster Global High Yield

Monthly Report – August 2025

Portfolio Manager Comment

After the end of the traditional Swedish July vacation period, very little has happened in the fixed income market. As expected, the Riksbank left the interest rate unchanged at its August meeting and left its path unchanged. Inflation has continued to surprise on the upside, something that the Riksbank is partly trying to explain with basket effects. If we look at real interest rates as the difference between STIBOR fixing and core inflation, the real interest rate is now significantly negative, but the economy is still not picking up. It is likely that we Swedes have become accustomed to artificially low interest rates that were created when the Riksbank tried to drive up inflation at the same time as fiscal policy, via the surplus target, put the economy on the back burner. Many distortions, such as private indebtedness, were built up during this period and we now must live with the consequences. Overall, the Swedish four-year swap rate moved down 13 basis points during the month.

There have been small movements in the credit market during the month, there has been approximately 20 basis points between the highest and lowest spread. During the month, a credit event was settled for the European index, which reduced the number of companies in the index, it will be increased again at the next index roll in September. The spread on both the European and American index is basically unchanged during the month.

Investment Goal and Strategy

The fund targets highly liquid exposure in European and North American High Yield credit, whilst keeping both currency and interest rate risk in Swedish Krona. To this end credit exposure is mainly assumed via index-based centrally cleared Credit Default Swaps (CDS). The Reference Indices of the CDS contracts are Itraxx Europe Crossover and CDX North America High Yield. The exposure to each issuer is equally weighted, ensuring a well-diversified portfolio.

The fund is also allowed to invest directly in corporate bonds with the corresponding rating. When the exposure to corporate credit is assumed through CDS contracts, the capital of the fund is simultaneously in AAA rated SEK bonds, primarily Swedish covered bonds.

The fund takes positions that eliminate its exposure to companies that do not meet the sustainability requirements set up by Captor. The fund is classified as Article 8 according to the Disclosure Regulation.

Reasons To Invest

The fund is suitable for investors with home currency in Swedish Krona looking for attractive risk-adjusted returns through a well-diversified exposure to global high yield credit. The strategy is suitable for investors looking for liquidity in all market conditions.

By construction the strategy effectively avoids being directly exposed to EUR or USD long term interest rates. In addition, the fund avoids all costs typically associated with hedging foreign currency back into Swedish Krona.

How To Invest In The Fund

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

Risk Profile

Credit risk is the dominant risk factor in the fund. It is exposed to credit spreads of both its bond positions and its position in CDS contracts.

Portfolio managers

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
