

CAPTOR

Iris Bond

Monthly Report – March 2025

Portfolio Manager Comment

A tough month for both interest rates and the stock market still gives hope for future returns. After the chaotic end of last month, several interesting things have happened in Europe. The EU has opened for financing both defense and other things via balance sheet expansion, where the previously strict budget rules for EMU cooperation have been eased. In Sweden, it has been decided to invest in defense and nuclear power with debt. All these investments that Europe is planning have also been conditioned on the investments benefiting European industry. This is an interesting departure from previous policies within the EU, where free competition both within Europe and for players from other countries has been emphasized. The fact that this competition has been on very different terms with, for example, state-backed Chinese companies has not really been taken seriously, which has knocked out European industry in several areas such as renewable energy, where Europe dominated both the solar cell and wind power industries early on. At the same time, inflation has stabilized at a level just above 2% and the market's expectations for interest rate cuts have changed to the opposite. Given this, it is not surprising that interest rates have moved upwards. The Swedish ten-year swap rate has risen by almost 40 basis points during the month from 2.57% to 2.94%.

Swedish mortgage bond spreads have remained stable during the month with the four-year spread at around 30 basis points against swap.

Investment Goal and Strategy

Captor Iris Bond is an actively managed fixed income fund. The capital is invested in ECBC covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals. The fund will invest in green bonds provided that they fit within the investment strategy. The fund further utilises interest rate swaps to take positions in long maturity Swedish interests rates. As part of the strategy to maintain these positions the fund also trades in swaptions.

Reasons To Invest

The fund has long duration and is therefore able to earn the risk premia available further out on tradable Swedish Krona interest rate curves. This strategy has over time offered an attractive risk-adjusted return. The performance of these positions tend to be negatively correlated with those of risky assets such as equities, especially in times of market stress. Therefore the fund can be an attractive component in a balanced portfolio. The fund is also appropriate for investors with long dated liabilities.

How To Invest In The Fund

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

Risk Profile

The fund has a higher sensitivity to changes in interest rates, i.e. a higher "duration", compared to other fixed income funds available in Swedish Krona. Interest rate risk is the dominant riskfactor of the fund, larger than the credit exposure of the fund, given that the fund's capital is invested in ECB covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals.

Portfolio managers

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
