

CAPTOR

# Iris Bond

## Monthly Report – July 2025

### Portfolio Manager Comment

The summer month of July was relatively calm, with the month beginning with continued talk about tariffs, which initially pushed up risk premiums. During the latter part of the month, several deals were made on tariff levels, which has reduced concerns and thus lowered risk premiums again. Agreements have been reached with, among others, the EU, South Korea and Japan. Both the ECB and the Fed announced the key interest rate during the month, both of which left it unchanged, which was as expected. Statistics during the month showed strong job figures in the US and higher-than-expected inflation in Sweden, which has pushed up interest rates somewhat. Across the Swedish curve, approximately one interest rate cut has been priced out. The Swedish ten-year swap rate is up 21 basis points during the month.

Swedish mortgage bond spreads have compressed somewhat during the month, with four-year Swedish spreads tightening around 2 basis points.

### Investment Goal and Strategy

Captor Iris Bond is an actively managed fixed income fund. The capital is invested in ECBC covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals. The fund will invest in green bonds provided that they fit within the investment strategy. The fund further utilises interest rate swaps to take positions in long maturity Swedish interests rates. As part of the strategy to maintain these positions the fund also trades in swaptions.

Reasons To Invest

The fund has long duration and is therefore able to earn the risk premia available further out on tradable Swedish Krona interest rate curves. This strategy has over time offered an attractive risk-adjusted return. The performance of these positions tend to be negatively correlated with those of risky assets such as equities, especially in times of market stress. Therefore the fund can be an attractive component in a balanced portfolio. The fund is also appropriate for investors with long dated liabilities.

How To Invest In The Fund

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

Risk Profile

The fund has a higher sensitivity to changes in interest rates, i.e. a higher "duration", compared to other fixed income funds available in Swedish Krona. Interest rate risk is the dominant riskfactor of the fund, larger than the credit exposure of the fund, given that the fund's capital is invested in ECBC covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals.

Portfolio managers

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
