

PORTFOLIO MANAGER COMMENT

The markets seem to have tired of war worries and risk premiums have generally compressed during the month. For Sweden, the slope of the 10-year versus 2-year yields has decreased by about 3 basis points to 0.47%. Longer interest rates are trading about 0.1% lower than at the end of May. In the US, inflation has returned sharply and interest rates have risen during the month. It is now five years since the US last saw an inflation print in line with the Federal Reserve's target and new interest rate hikes have taken over future expectations. For the Swedish economy, inflation expectations remain low, the market expects core inflation to be below 1% at an annual rate next week, but that figure is difficult to compare after all the expansionary fiscal policy.

The Swedish ten-year swap rate has decreased by 13 basis points during the month and closes the half-year at 2.75%. The European IG credit index has compressed by about one basis point to 52 bp during the month, which is in line with the maturity change, while the US IG credit index is trading flat at 51 bp.

INVESTMENT GOAL AND STRATEGY

The fund targets highly liquid exposure in European and North American Investment Grade credit, whilst keeping both currency and interest rate risk in Swedish Krona. To this end credit exposure is assumed via index-based centrally cleared Credit Default Swaps (CDS). The Reference Indices of the CDS contracts are Itraxx Europe Main and CDX Investment Grade North America. The exposure to each issuer is equally weighted, ensuring a well-diversified portfolio.

The fund takes positions that eliminate its exposure to companies that do not meet the sustainability requirements set up by Captor. The fund is classified as Article 8 according to the Disclosure Regulation.

The fund's capital will be invested in AAA rated SEK bonds, primarily Swedish covered bonds. Interest rate exposure is assumed via these bonds and cleared interest rate swaps in Swedish Krona.

REASONS TO INVEST

The fund is suitable for investors with home currency in Swedish Krona looking for attractive risk-adjusted returns through a well-diversified exposure to global investment grade credit. The strategy is suitable for investors looking for liquidity in all market conditions.

By construction the strategy effectively avoids being directly exposed to EUR or USD long term interest rates. In addition, the fund avoids all costs typically associated with hedging foreign currency back into Swedish Krona.

HOW TO INVEST IN THE FUND

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

RISK PROFILE

Interest rate risk and credit risk are the dominant risk factors in the fund. Typically a portfolio with equal exposure to these two risk factors will create a well balanced portfolio due to low correlation between them.

PORTFOLIO MANAGERS

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
