

SCILLA GLOBAL EQUITY

MONTHLY REPORT - JULY 2026

PORTFOLIO MANAGER COMMENT

Global market-cap weighted index moved slowly lower during the month, driven by the escalation of the Iran conflict and concerns around AI companies. At the same time, there was a clear divergence between strategies, with low-volatility strategies benefiting. The fund ended the month up +3.1% (Class C), while the fund's benchmark index was up +2.8% and global market-cap-weighted index was down -0.8%.

There was positive performance across most of the fund's sector exposures. Monthly performance was primarily driven by positive contributions from financials, technology and consumer staples, while it was weighed down slightly by a negative contribution from infrastructure. The best-performing sector was technology, where the holdings are up approximately +8% on average in local currency. By country, Hong Kong was the strongest market with an average gain of +13.2%, while the fund's holdings in Sweden performed the weakest with a marginal decline of -0.1%. The U.S. accounted for the largest positive contribution to the fund's return. In FX, SEK strengthened against several currencies, mainly CHF (-1.7%), USD and HKD (-1.3%) and SGD (-1.0%), while SEK weakened the most against NOK (+2.7%).

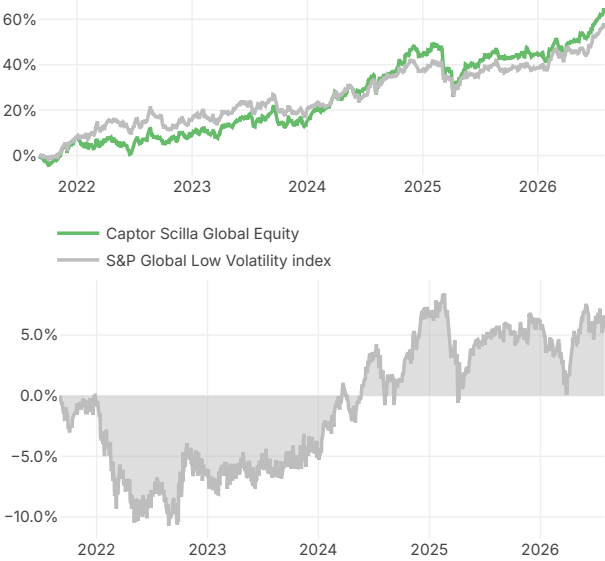

The following companies saw the largest movement during the month: Microsoft (+25%), Bank of China (+23%) and Ericsson (-13%). The fund currently has an equity exposure of 99%.

INVESTMENT GOAL AND STRATEGY

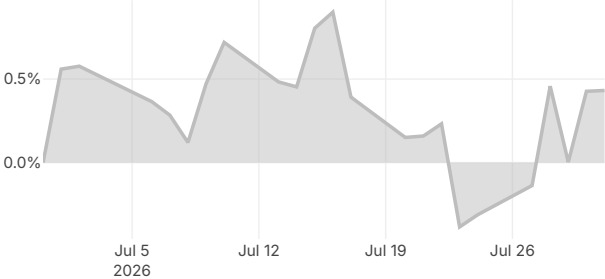

Captor Scilla Global Equity is an actively managed fund that invests globally in developed market equities. The fund is based on Captor's investment strategy Scilla. The strategy invests in companies that offer an attractive ratio between expected return and risk, compared to the global market as a whole. The fund excludes from its universe companies that does not comply with Captor's ESG screening criteria, and screens its positions continuously.

Furthermore the strategy can shift the total equity exposure of the fund. In volatile markets the fund can hold up to 50% in cash or high grade bonds, and apply up to 20% leverage in calmer markets. The selection method means that the strategy is exposed to 200-300 companies, which is approximately one fifth of the fund's investable universe. The fund's strategy is tuned only slightly over time while the fundamental strategy stays the same.

REASONS TO INVEST

Captor Scilla Global Equity is suitable for those who want an allocation to global equities and at the same time have a stable level of risk.

HOW TO INVEST IN THE FUND

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

RISK PROFILE

The fund aims to have lower volatility than the corresponding market value-weighted investment over time, primarily reducing large sequential drawdowns in times of stressed markets.

PORTFOLIO MANAGERS

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.

daniel.karlgren@captor.se

William Sjöberg holds a MSc from KTH in Stockholm with financial mathematics focus and an education in quantitative finance from the CQF Institute. William has previously worked at Nordea for eight years in derivatives covering several asset classes.
